ITA1441 – ETHICAL HACKING

LAB RECORD – EXPERIMENTS 4 TO 6

Name: D.Hasini Register No.: 192425147 Date: 24-10-26

EXPERIMENT 4: INFORMATION GATHERING USING THEHARVESTER

Experiment question: Perform information gathering using theHarvester.

Aim

To use theHarvester to gather publicly available information related to a domain for reconnaissance.

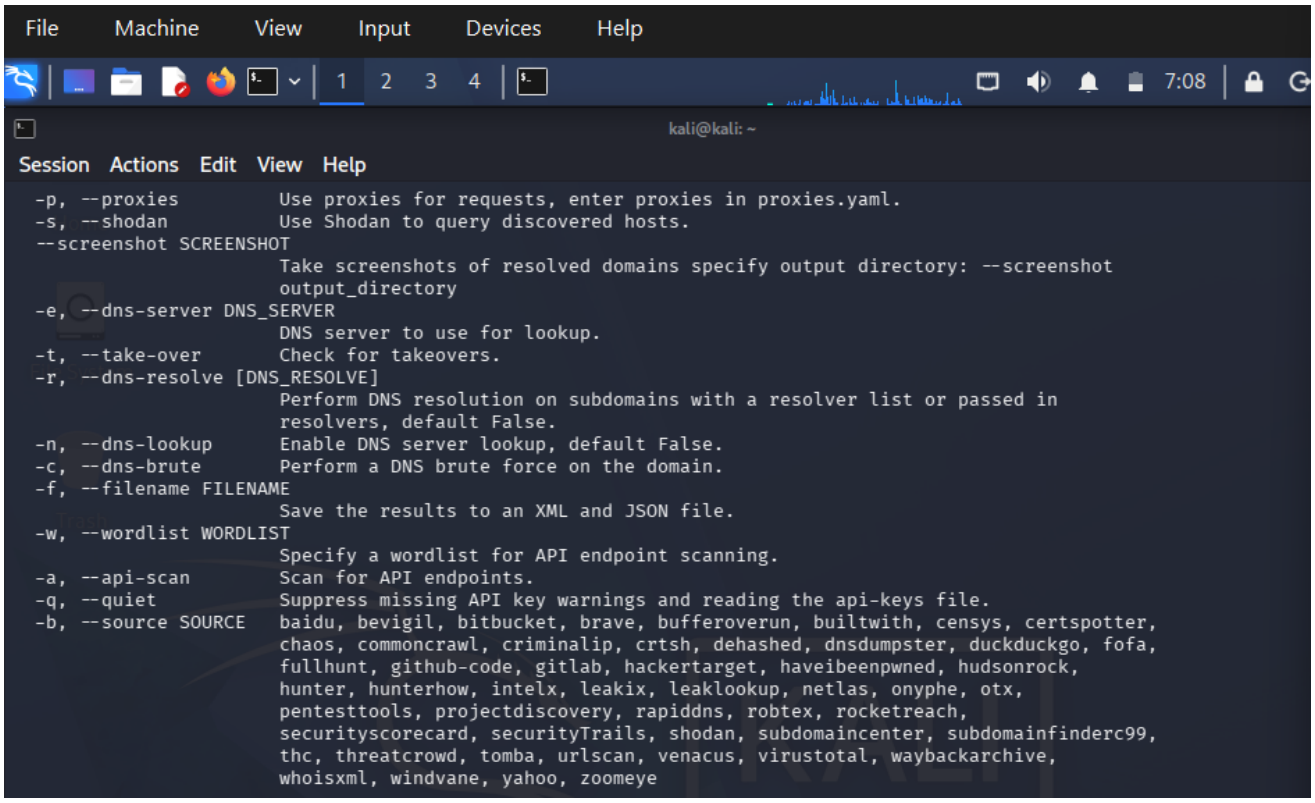

Algorithm

1. Open Kali Linux and launch Terminal.
2. Check theHarvester options by displaying its help information.
3. Review the available command-line options and data sources.
4. Capture the terminal output for the lab record.

Command(s) used

```
theHarvester -h
```

Output Screenshot

Result

The theHarvester command-line options and available data sources were displayed.

EXPERIMENT 5: GOOGLE AND WHOIS RECONNAISSANCE

Experiment question: Perform Google and WHOIS reconnaissance for a domain.

Aim

To use WHOIS to view publicly available domain registration information.

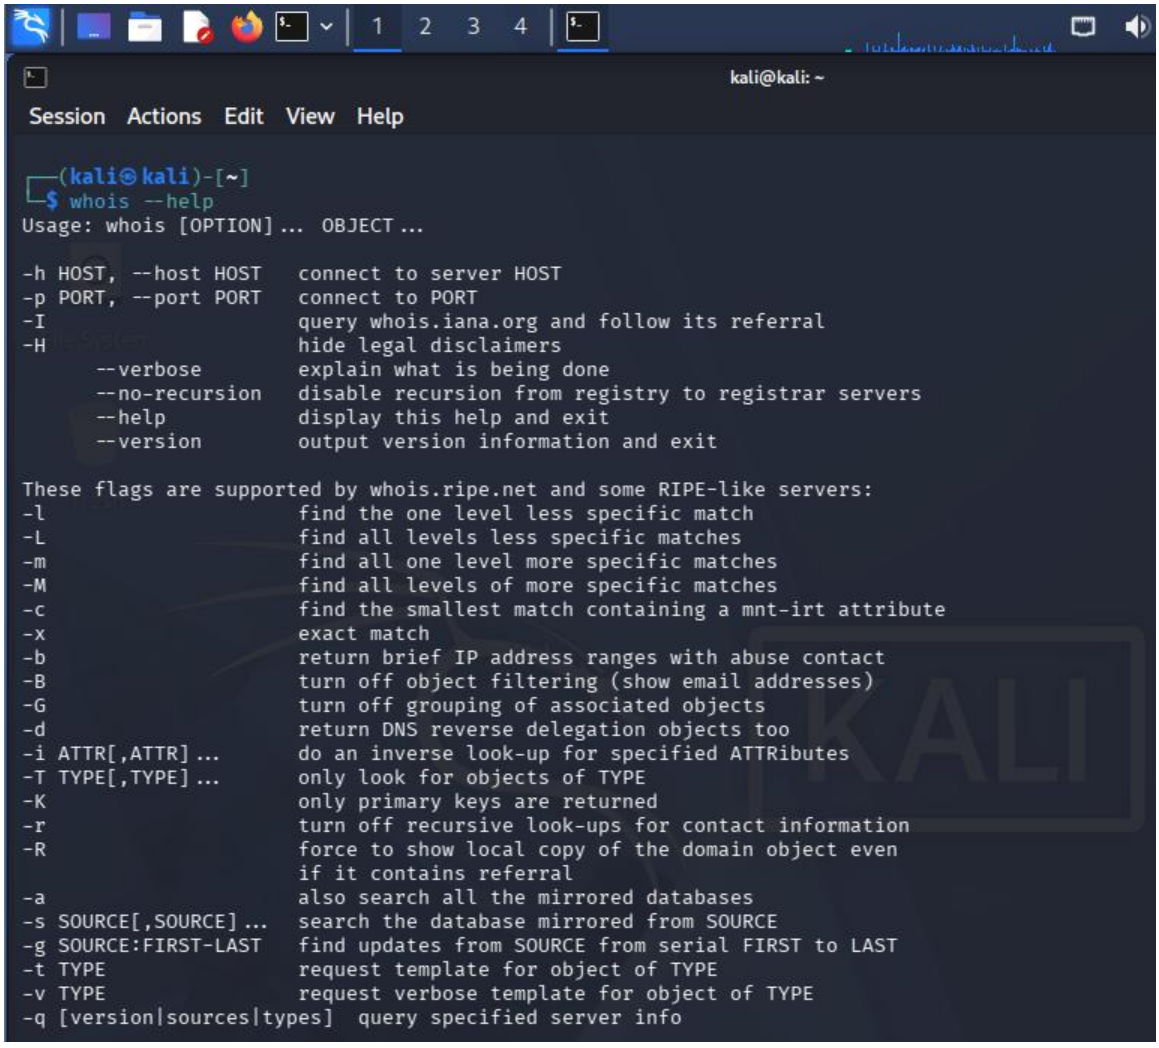

Algorithm

5. Open Kali Linux and launch Terminal.
6. Display the WHOIS command help to review its options.
7. Run a WHOIS lookup for the example.com domain.
8. Observe the returned registration information and capture the output.

Command(s) used

```
whois --help
whois example.com
```

Output Screenshot 1 – WHOIS Help

Output Screenshot 2 – WHOIS Lookup

Result

The WHOIS help options were displayed, and the lookup returned public registration information for EXAMPLE.COM.

EXPERIMENT 6: WINDOWS NETWORK COMMANDS

Experiment question: Execute Windows network commands such as ping, tracert, ipconfig, and netstat.

Aim

To use Windows network commands to test local connectivity, trace a route, view IP configuration, and display active network connections.

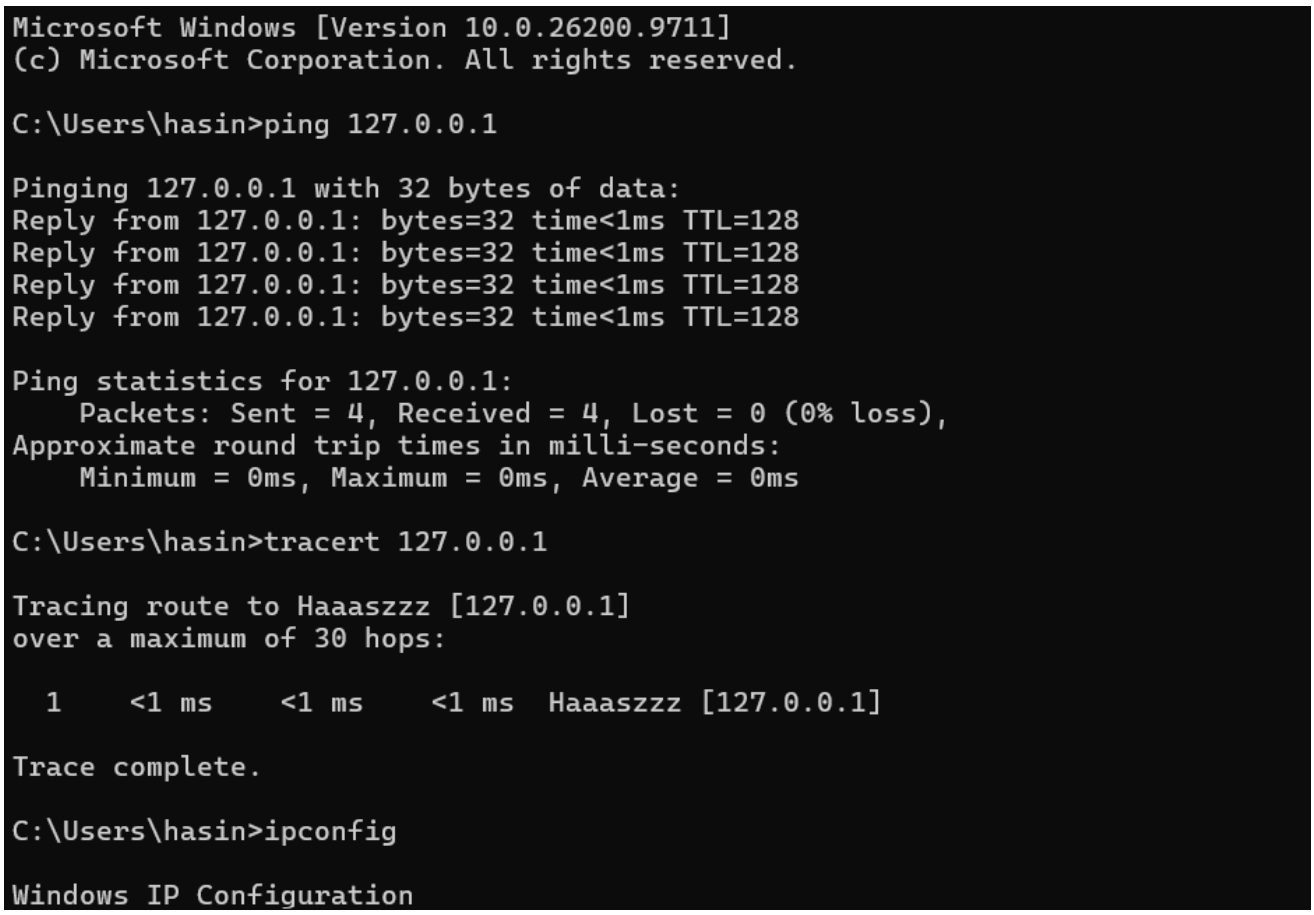

Algorithm

9. Open the Run dialog using Windows + R.
10. Type cmd and press Enter to open Command Prompt.
11. Run ping 127.0.0.1 and observe the replies.
12. Run tracert 127.0.0.1 to display the route to the local host.
13. Run ipconfig to display Windows IP configuration.
14. Run netstat to display network connections.
15. Capture the command outputs for the lab record.

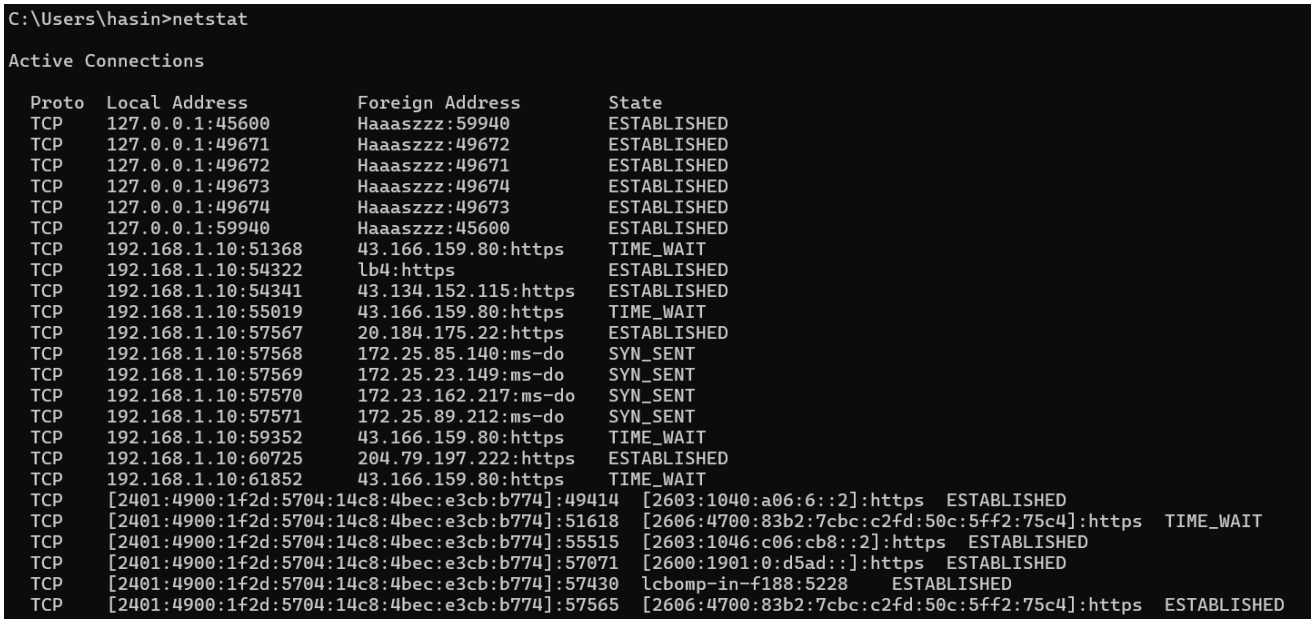

Command(s) used

```
ping 127.0.0.1
tracert 127.0.0.1
ipconfig
netstat
```

Output Screenshot 1 – Ping, Tracert and Ipconfig

Output Screenshot 2 – Netstat

```
C:\Users\hasin>netstat

Active Connections

  Proto  Local Address          Foreign Address        State

  TCP    [2401:4900:1f2d:5704:14c8:4bec:e3cb:b774]:57430  lcbomp-in-f188:5228    ESTABLISHED
  TCP    [2401:4900:1f2d:5704:14c8:4bec:e3cb:b774]:57565  [2606:4700:83b2:7cbc:c2fd:50c:5ff2:75c4]:https  ESTABLISHED
```

Result

The ping command received replies from the local host, tracert completed the local route, and netstat displayed active network connections. The ipconfig command was started in the first screenshot, but its complete output is not visible.
