ITA1441 – ETHICAL HACKING

LAB RECORD – EXPERIMENTS 7 TO 10

Name: D.Hasini Register No.: 192425147 Date: 24-10-26

EXPERIMENT 7: VULNERABILITY ANALYSIS USING CGI SCANNING WITH NIKTO

Experiment question: Perform vulnerability analysis using CGI scanning with Nikto.

Aim

To check a web server for potential vulnerabilities and CGI-related directories using Nikto.

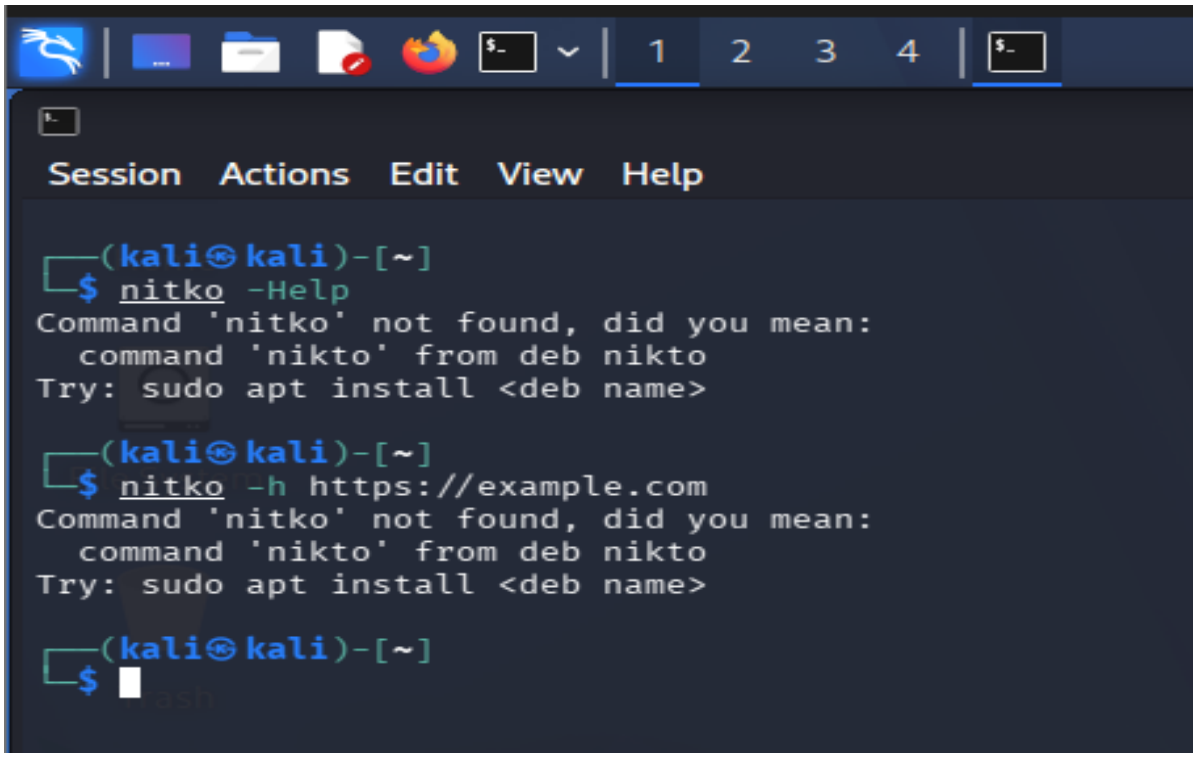

Algorithm

1. Open Kali Linux and launch Terminal.
2. Check Nikto availability and its command-line options.
3. The command shown in the screenshot reports that Nikto is not installed.
4. Record the terminal output and install or run the tool only if permitted by the lab setup.

Command(s) used

```
nikto -Help
nikto -h https://example.com
```

Output Screenshot

Result

The commands were attempted, but the terminal reported that Nikto was not found. The scan could not be completed because the tool was not installed or the command was unavailable.

EXPERIMENT 8: NETWORK TRAFFIC ANALYSIS USING WIRESHARK

Experiment question: Capture and analyze network packets using Wireshark.

Aim

To capture and examine ICMP packets using Wireshark.

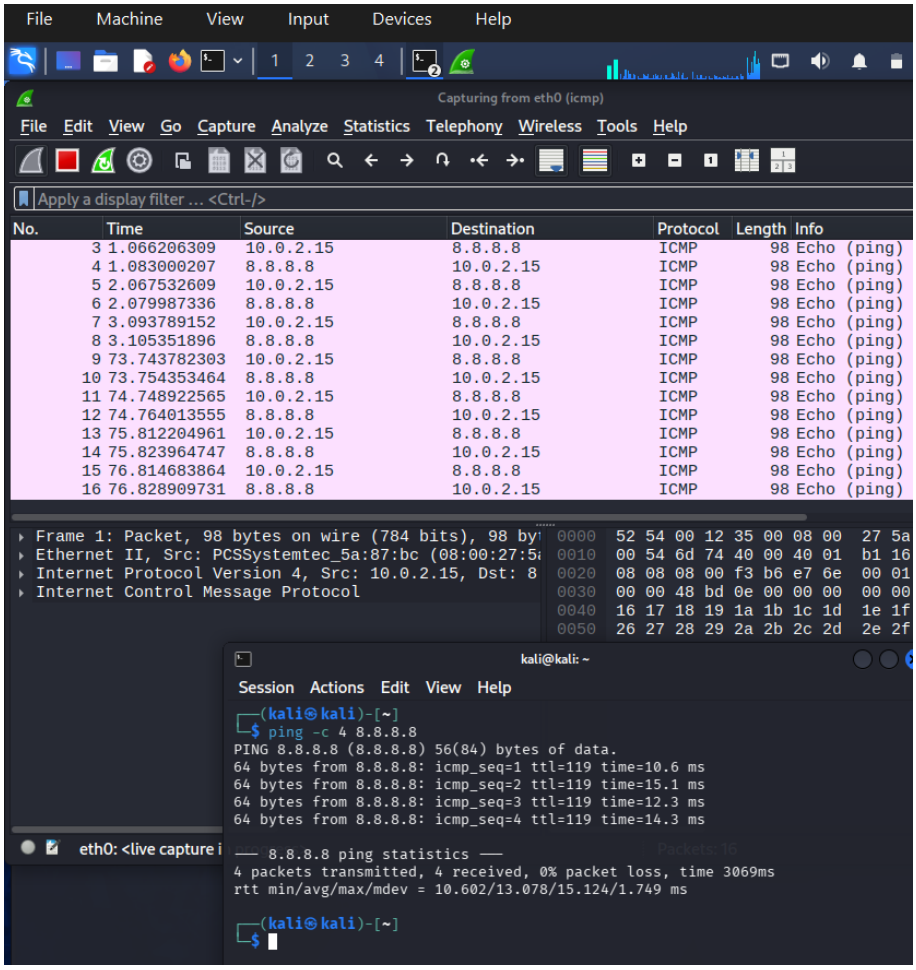

Algorithm

5. Open Wireshark in Kali Linux and start capturing on the active eth0 interface.
6. Generate ICMP traffic by pinging 8.8.8.8 from a terminal.
7. Observe the captured ICMP echo request and reply packets.
8. Stop the capture and take a screenshot of the packet list.

Command(s) used

```
ping -c 4 8.8.8.8
Display filter: icmp
```

Output Screenshot

Result

Wireshark captured ICMP echo request and reply packets while the ping command was running.

EXPERIMENT 9: EXPLORING THE MSFVENOM TOOL

Experiment question: Explore the msfvenom tool and its available payload options.

Aim

To view the command-line options and payload list available in msfvenom.

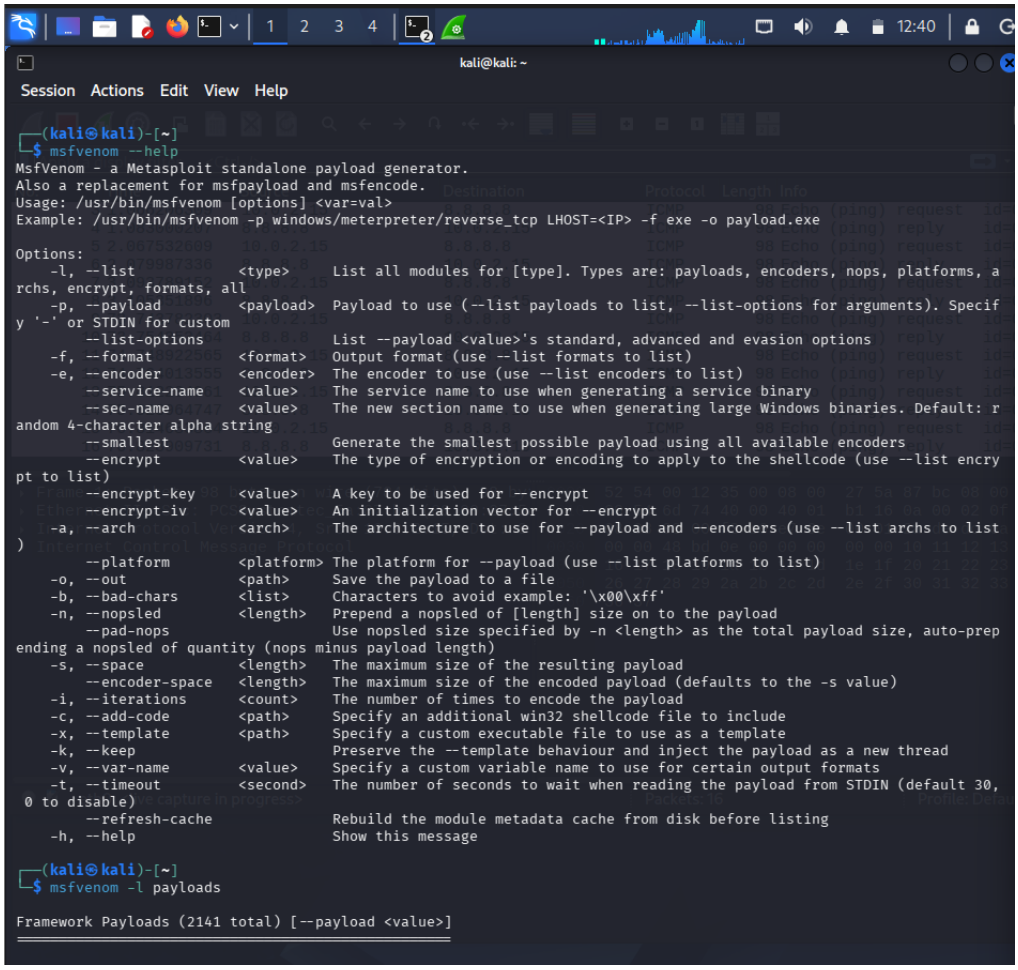

Algorithm

9. Open Kali Linux and launch Terminal.
10. Run the msfvenom help command.
11. Run the payload-list command to display available payload categories.
12. Review the output and capture the terminal screenshot.

Command(s) used

```
msfvenom --help
msfvenom -l payloads
```

Output Screenshot

Result

The msfvenom help options and the beginning of the available payload list were displayed. No payload file was generated or executed.

EXPERIMENT 10: WINDOWS BATCH FILE EXECUTION

Experiment question: Create and execute a Windows batch file.

Aim

To create and run a simple batch file that displays messages in Command Prompt.

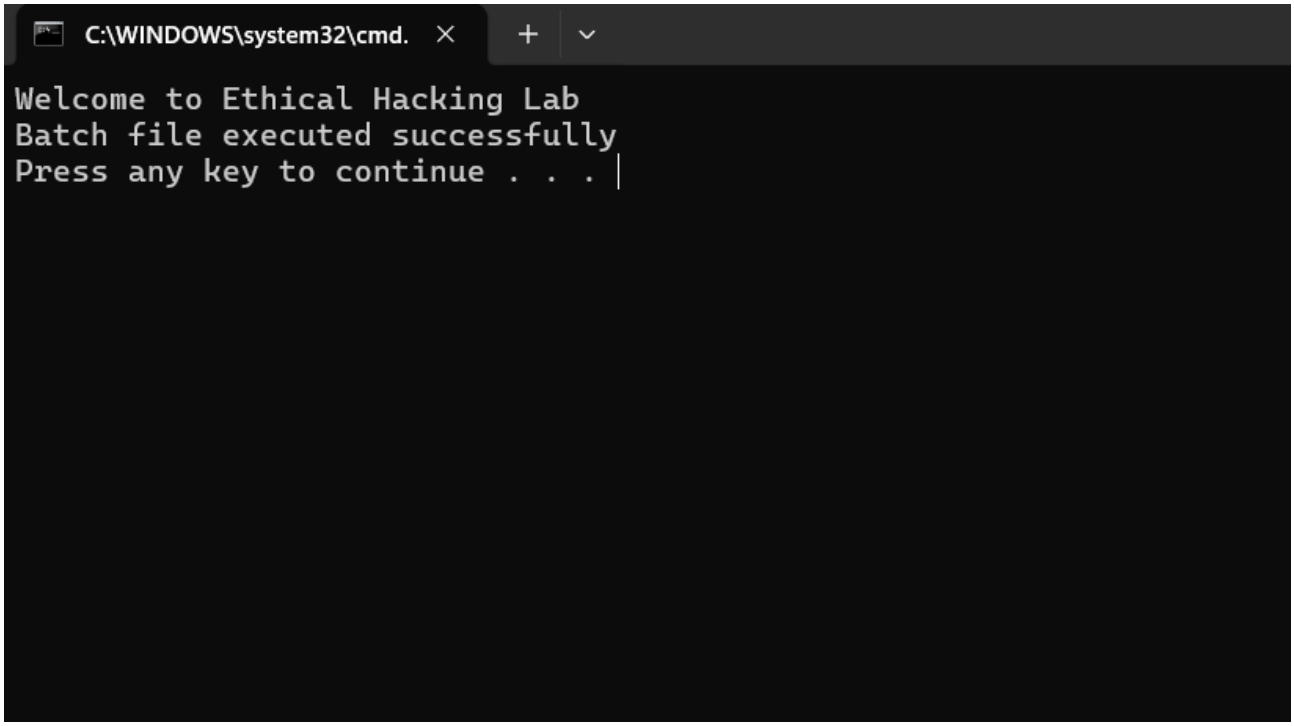

Algorithm

13. Open Notepad in Windows.
14. Type the batch commands to display two messages and pause.
15. Save the file with a .bat extension.
16. Double-click the saved file to execute it.
17. Observe the output and capture a screenshot.

Command(s) used

```
@echo off
echo Welcome to Ethical Hacking Lab
echo Batch file executed successfully
pause
```

Output Screenshot

Result

The batch file executed successfully and displayed the expected messages in the Command Prompt window.
